

OpenERP Integration for Fertilizer & Chemical manufacturing company

Customer

Lamthao Fertilizers & Chemicals Joint-stock Company is one of leading manufacturing fertilizers & chemicals company in Vietnam with nearly 3000 employees. It has a widely distribution network which spreads over many provinces and cities in Vietnam.

Challenge

- To provide an improved system for sales & logistics process in replacement of current 5 -year using system(Oracle)
- To integrate information of sales and logistic into one system
- To customize logistic module to meet client's specific procedure
- To give solution for unsolved problems in existing system
- To expand the system for users in its branch
- No available tool for supporting information integration, most of the operations were manually logged

Solutions

- Provide an OpenERP solution including the following modules: Sales, Logistics, Accounting, Warehouse & HR
- Customize and improvement sales and logistic module to replace the existing one
- Develop new module for logistics to meet client's specific procedure in managing shipping plan, locations, logistics suppliers, price rules
- Complete almost 70 reports with different filter criteria
- Fill data from system onto client's available invoice and transportation form
- Improve accounting module.
- Migrate data from Oracle Business Suite.

Results

- Successfully replaced Oracle Business Suite with OpenERP.
- Departments from multi-locations can use the ERP as it was deployed using the hosted model
- Elimination of manual entries and reduction of errors due to human mistakes.
- Better accounting practices, fully compliant with Vietnam Accounting Standard.
- Improved financial control, gained visibility into the organization with financial and management accounting functionality.
